To: International Seabed Authority (ISA) and its Member States
From: Indigenous Peoples Organizations (IPOs) Around the World
Subject: **Indigenous Peoples Call for a Global Moratorium on Deep-Sea Mining**

Excellencies,

We write to you on behalf of Asia Indigenous Peoples Network on Extractive Industries and Energy (AIPNEE) – a regional platform of Indigenous defenders and their organizations in Bangladesh, Cambodia, India, Indonesia, Malaysia, Nepal, Pakistan, the Philippines, Sri Lanka, and West Papua – and the undersigned Indigenous Peoples organizations, supporting civil society and environmental groups, and individuals, united in our mission to protect Indigenous Peoples’ rights in pursuit of a just and sustainable management of the environment, including the ocean.

In light of the significant environmental and cultural risks as well as equity concerns connected to deep-sea mining that disproportionately threaten Indigenous Peoples, we strongly urge all ISA Member States to take a firm public stance in support of a moratorium or precautionary pause on deep-sea mining (DSM).

Indigenous Peoples are stewards of over 25% of the Earth’s land and seas.¹ For many coastal Indigenous Peoples, the ocean is understood as a mother, ancestor, relative, or living kin, forming part of a broader network of reciprocal relationships, responsibilities, and genealogical connections that underpin cultural identity, governance systems, and stewardship practices.² The ocean is also a provider of vast resources that they economically depend on. In this context, **Indigenous Peoples are rightsholders of customary coastal and marine territories, knowledge holders who have and continue to act as sustainable managers of marine environment, and frontliners who most immediately and acutely experience the adverse impacts of exploitative activities at sea.**

First, we note the deep sea is the largest and the least explored ecosystem on Earth. The best available science suggests DSM would cause substantial, potentially irreversible harm to deep-seabed habitats including those below Indigenous marine territories, the millions of undiscovered species that are presumed to inhabit there, and ultimately the entire marine environment that plays a crucial role in climate mitigation as we grapple with the triple planetary crisis.³

³ Craig R. Smith et al., Deep-Sea Misconceptions Cause Underestimation of Seabed-Mining Impacts, 35 *TRENDS IN ECOLOGY & EVOLUTION* 853 (2020); Andrea Koschinsky et al., Deep-sea mining: Interdisciplinary research on potential environmental, legal, economic, and societal implications, 14 *INTEGRATED ENV'T ASSESSMENT & MGMT.* 672 (2018); Ann Vanreusel et al., Threatened by mining, polymetallic nodules are required to preserve abyssal epifauna, 6 *SCI. REPORTS* (2016); Travis W. Washburn et al., Impacts of the first deep-sea seafloor massive sulfide mining excavation tests on benthic

Deep sea mining also threatens the cultural integrity of coastal Indigenous communities by jeopardizing traditional economies based on fishing and sustainable use of marine resources. Waste, noise, and other disturbances caused by mining can pollute or reduce productivity of traditional fisheries and waters, risking the integrity and cultural continuity of customary food and knowledge systems as well as economic resilience of coastal Indigenous communities.

As a result, DSM can accelerate unwanted or forcible urban migration. For coastal Indigenous communities whose cultural identity is grounded in their relationship and daily interaction with the marine environment, displacement erodes Indigenous identity by disrupting family structures, disintegrating communities, and hampering the practice of vibrant cultural traditions directly linked to the sea.⁴

Thus, the potential impacts of deep sea mining directly translate as a threat to the Indigenous Peoples' rights to self-determination, among other rights, as enshrined in international laws, including the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), Indigenous and Tribal Peoples Convention of the International Labour Organization (ILO Convention No. 169), the International Covenant on Civil and Political Rights (ICCPR) and the International Covenant on Economic, Social and Cultural Rights (ICESCR), and raises equity concerns about benefit distribution as stipulated in the United Nations Convention on the Law of the Sea (UNCLOS).⁵

In addition to these potential impacts, Indigenous Peoples have already been experiencing actual violations of their land and marine territorial or tenure rights due to the frequent exclusion from public consultations and lack of free, prior, and informed consent (FPIC) of Indigenous communities in the design and implementation of corporate, national, and international regulations regarding DSM.⁶ Furthermore, corporations have dismissed opposition from coastal Indigenous communities, deepening historical patterns of marginalization and cultural erosion we have witnessed in the context of terrestrial mining and other extractive projects.⁷

With the industry aggressively escalating DSM explorations under the name of green transition, while we sympathize with the urgency of the climate crisis, we firmly emphasize that just transition must ensure sustainable prosperity among all peoples, including Indigenous Peoples, as well as the more-than-human world including the ocean.

We recall the 2021 International Union for Conservation of Nature (IUCN) Congress in Marseille, whereby IUCN Member States, civil society and Indigenous Peoples organizations overwhelmingly voted to call for a moratorium on DSM until and unless FPIC of affected Indigenous Peoples is obtained, among other conditions.⁸ We thus call on the Member States, as leaders and decisionmakers, to join us once more and

⁸ Bruno Oberle, *IUCN Director General's Open Letter to ISA Members on Deep-Sea Mining*, Int'l Union for Conservation of Nature (Mar. 6, 2023), <https://iucn.org/dg-statement/202303/iucn-director-generals-open-letter-isa-members-deep-sea-mining>;

demonstrate their commitments to defend the deep sea, international law including UNCLOS and UNDRIP, as well as the core values of sustainable development, including multilateralism and just transition.

We accordingly welcome the 43 Member States that have announced support for a moratorium or precautionary pause on DSM. Furthermore, we request the Member States that are yet to endorse a moratorium or precautionary pause on DSM to do so immediately and publicly, and to ensure that this position is clearly implemented at the ISA. We also call on the ISA to create space for inclusive and meaningful engagement of Indigenous Peoples in the global dialogue on DSM and ocean governance more broadly by establishing an Indigenous Peoples Advisory Body at the ISA.

The question of DSM is one that penetrates the root of the climate crisis: a history of anthropocentric extractivism that placed corporate profit before public good and collective governance. We invite you to change the tide of this history by answering in solidarity with Indigenous Peoples organizations that DSM should be halted to protect the deep-sea and the current and future generations who depend on it.

Yours sincerely,

Prabintra Shakya

Convenor
